# **Vagrant**

官网: https://www.vagrantup.com/

虚拟机 (镜像) 下载: https://app.vagrantup.com/boxes/search

```
Usage: vagrant [options] <command> [<args>]
 2
 3
        -h, --help
                                         Print this help.
 4
 5
    Common commands:
                         manages autocomplete installation on host
 6
         autocomplete
 7
         hox
                         manages boxes: installation, removal, etc.
 8
         cloud
                         manages everything related to Vagrant Cloud
9
         destrov
                         删除vagrant在电脑上创建box所占用的资源,该命令可能不会执行成功可
    以使用remove进行清理
                         输出所有的虚拟机的状态的详细信息
10
         global-status
         halt
                         关机
11
12
                -f
                         强制关机
13
         help
                         shows the help for a subcommand
         init
                         initializes a new Vagrant environment by creating a
14
    Vagrantfile
15
         login
16
                         packages a running vagrant environment into a box
         package
17
         plugin
                         manages plugins: install, uninstall, update, etc.
                         displays information about quest port mappings
18
         port
                         connects to machine via powershell remoting
19
         powershell
20
         provision
                         provisions the vagrant machine
21
                         deploys code in this environment to a configured
         push
    destination
                         connects to machine via RDP
22
        rdp
23
         reload
                         restarts vagrant machine, loads new Vagrantfile
    configuration
24
                         resume a suspended vagrant machine
         resume
25
                         start Vagrant server
         serve
26
                         manages snapshots: saving, restoring, etc.
         snapshot
                         connects to machine via SSH
27
         ssh
28
         ssh-config
                         outputs OpenSSH valid configuration to connect to the
    machine
29
                         outputs status of the vagrant machine
         status
                         suspends the machine
30
         suspend
                         starts and provisions the vagrant environment
31
         up
32
         upload
                         upload to machine via communicator
                         validates the Vagrantfile
33
         validate
                         prints current and latest Vagrant version
34
         version
35
                         executes commands on a machine via WinRM
         winrm
36
         winrm-config
                         outputs WinRM configuration to connect to the machine
37
    For help on any individual command run `vagrant COMMAND -h`
38
39
    Additional subcommands are available, but are either more advanced
40
41
    or not commonly used. To see all subcommands, run the command
42
    `vagrant list-commands`.
```

```
43
            --[no-]color
                                          Enable or disable color output
44
            --machine-readable
                                          Enable machine readable output
45
        -v. --version
                                          Display Vagrant version
46
            --debug
                                          Enable debug output
47
            --timestamp
                                          Enable timestamps on log output
48
            --debug-timestamp
                                          Enable debug output with timestamps
49
            --no-tty
                                          Enable non-interactive output
```

## 操作box

```
I:\vagrantSys>vagrant box --help
 2
    Usage: vagrant box <subcommand> [<args>]
 3
    Available subcommands:
4
         add
 6
         list
 7
         outdated
8
         prune
9
         remove
10
         repackage
11
         update
12
13
    For help on any individual subcommand run `vagrant box <subcommand> -h`
14
            --[no-]color
                                          Enable or disable color output
            --machine-readable
                                          Enable machine readable output
15
16
        -v, --version
                                          Display Vagrant version
            --debug
                                          Enable debug output
17
            --timestamp
                                          Enable timestamps on log output
18
            --debug-timestamp
                                          Enable debug output with timestamps
19
20
            --no-tty
                                          Enable non-interactive output
```

1、添加一个box,并命名: vmware\_win10\_desktop

```
1 set VAGRANT_HOME d:\MYVagrant # 设置vagrant新建虚拟机的保存路径,必要。
2 vagrant box add vmware_windows10_desktop.box --name "vmware_win10_desktop"
```

2、查看所有的box

```
1 | vagrant box list
```

3、在指定的目录下面创建一个Vagrantfile文件(注:vagrantfile所在的文件夹会被映射到虚拟机内部,这样可以实现文件的共享),并使用该文件启动上面新建的box

```
Vagrant.configure("2") do |config|
2
       config.vm.define "vmware_win10_desktop"
                                               # 必须加上这个
3
       config.vm.box="vmware_win10_desktop"
4
       config.vm.guest=:windows
5
       config.vm.communicator="winrm"
       config.vm.network "forwarded_port", guest:3389, host:53389 # 这里的guest表
   示box虚拟机,host表示物理机
   end
  vagrant init [box name]
2
  vagrant up [box name] # 启动虚拟机
```

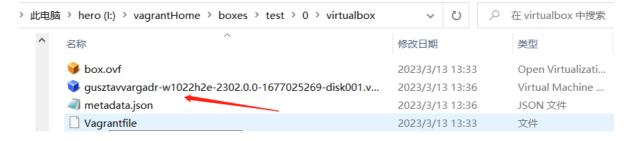

#### 4、连接虚拟机

```
1 vagrant ssh # 以ssh的方式进行连接,默认vagrant/vagrant
2 vagrant rdp # 以rdp方式连接,默认密码也是vagrant/vagrant
```

## 常见问题解决

### 无法通过网络连接box

如果通过ssh或rdp无法连接box时,这是我们去存放虚拟机的路径下面手动的启动该虚拟机即可。

## vagrant常见配置

## vagrant Provisioning

在 Vagrant 环境的生命周期中,供应发生在某些时候:

- 在创建环境的第一个上 vagrant up , 运行供应。如果环境已经创建并且 up 只是恢复机器或 启动它,除非 --provision 明确提供标志,否则它们将不会运行。
- 何时 vagrant provision 在运行环境中使用。
- 什么时候 vagrant reload --provision 调用。 --provision 必须存在标志才能强制提供。

您还可以启动您的环境,并通过指定 --no-provision.

```
Vagrant.configure("2") do |config|
# ... other configuration

config.vm.provision "shell", path: "test.ps1"
# config.vm.provision "shell", inline: "echo hello"
# config.vm.provision "file", source: "~/.gitconfig", destination:
".gitconfig"

end
end
```

### **Providers**

指定以哪个软件 (virtualbox|vmware|hyper-v) 启动该box, 用法如下:

```
1 | vagrant up --provider=virtualbox
```

默认情况下vagrant会自动识别。

### 网络配置

专用网:

1 config.vm.network "private\_network", type: "dhcp" # 给虚拟机添加了一张网卡,默认为仅主机模式

```
eth0: flags=4163<UP,BROADCAST,RUNNING,MULTICAST> mtu 1500
    inet 10.0.2.15 netmask 255.255.255.0 broadcast 10.0.2.255
    inet6 fe80::a00:27ff:fed5:97a6 prefixlen 64 scopeid 0×20ether 08:00:27:d5:97:a6 txqueuelen 1000 (Ethernet)
    RX packets 523 bytes 63732 (62.2 KiB)
    RX errors 0 dropped 0 overruns 0 frame 0
    TX packets 382 bytes 72517 (70.8 KiB)
    TX errors 0 dropped 0 overruns 0 carrier 0 collisions 0

eth1: flags=4163<UP,BROADCAST,RUNNING,MULTICAST> mtu 1500
    inet 192.168.56.4 netmask 255.255.255.0 broadcast 192.168.56.255
    inet6 fe80::a00:27ff:fef2:e541 prefixlen 64 scopeid 0×20ether 08:00:27:f2:e5:41 txqueuelen 1000 (Ethernet)
    RX packets 16 bytes 12968 (12.6 KiB)
    RX errors 0 dropped 0 overruns 0 frame 0
```

#### 公共网:

1 config.vm.network "public\_network" # 给虚拟机又添加了一张网卡,默认为桥接模式

### 磁盘快照配置

#### 拍摄快照:

```
vagrant snapshot save vb-kali2022 init-system
h摄的box 时间节点的描述
vagrant snapshot delete [vm-name] NAME-description
```

请注意:在使用 vagrant snapshot save | restore 时,就不要使用 vagrant snapshot push | pop, 这样是不安全的。这里要求我们会操作save|restore就可以了。

### 添加磁盘:

```
config.vm.disk :disk, size: "100GB", primary: true # 设置主磁盘的大小为100GB
h.vm.disk :disk, size: "10GB", name: "extra_storage" # 附加一个10GB的扩展磁盘
```

### 打包虚拟机

```
1 | vagrant package --output [name.box] # 默认输出package.box
```

如果要将虚拟机iso文件打包为vagrant box,请使用packer进行。

### Multi-Machine

直接看官网: https://developer.hashicorp.com/vagrant/docs/multi-machine
